01 – Introduction

Piergiorgio Cipriano

This project has received funding from the European Union's HE research and innovation programme under the grant agreement No. 101057497

EDIAQI

First session (June 21st)

INTRODUCTION

- Presentations
- OGC Intro
- Data interoperability

SENSORTHINGS API

- Intro
- Data Model
- API

STA REQUESTS

- Locations, Things
- Datastream, Multidatastream
- Observations

FROST

- Characteristics
- Deploy options
- PostgreSQL and plugin

STA+

- STA limitations
- STA+ additional properties
- Applications for EDIAQI

INSPIRE

- Directive
- Regulations
- Technical Guidelines

Second session (July 21st)

WHY FROST?

- Reasons
- Evolution
- Live demos

Dr. Hylke van der Schaaf
(Fraunhofer Institute)

ROUND TABLE

- Questions and comments to Dr. van der Schaaf

DEPLOY ON TOMCAT

- Example Ferrara
 - PostgreSQL
 - PostGIS
 - TimeScaleDb

DEPLOY DOCKER

- Brief how-to

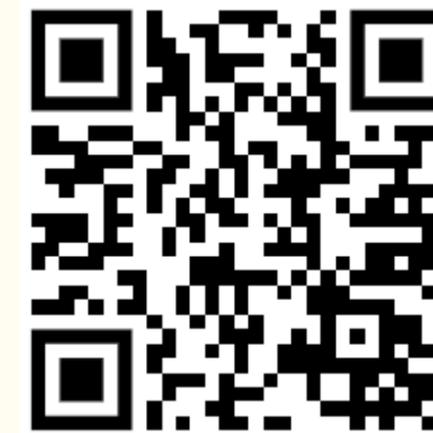

DATA INGESTION

- Examples in Ferrara
 - weather
 - traffic
 - air quality (out)

SEMANTICS 4 EDIAQI

- Parameters and UoM
- Frequency
- Location / Spatial

Training sessions

Training Session on data interoperability: FROST open source server solution for interoperable dynamic data

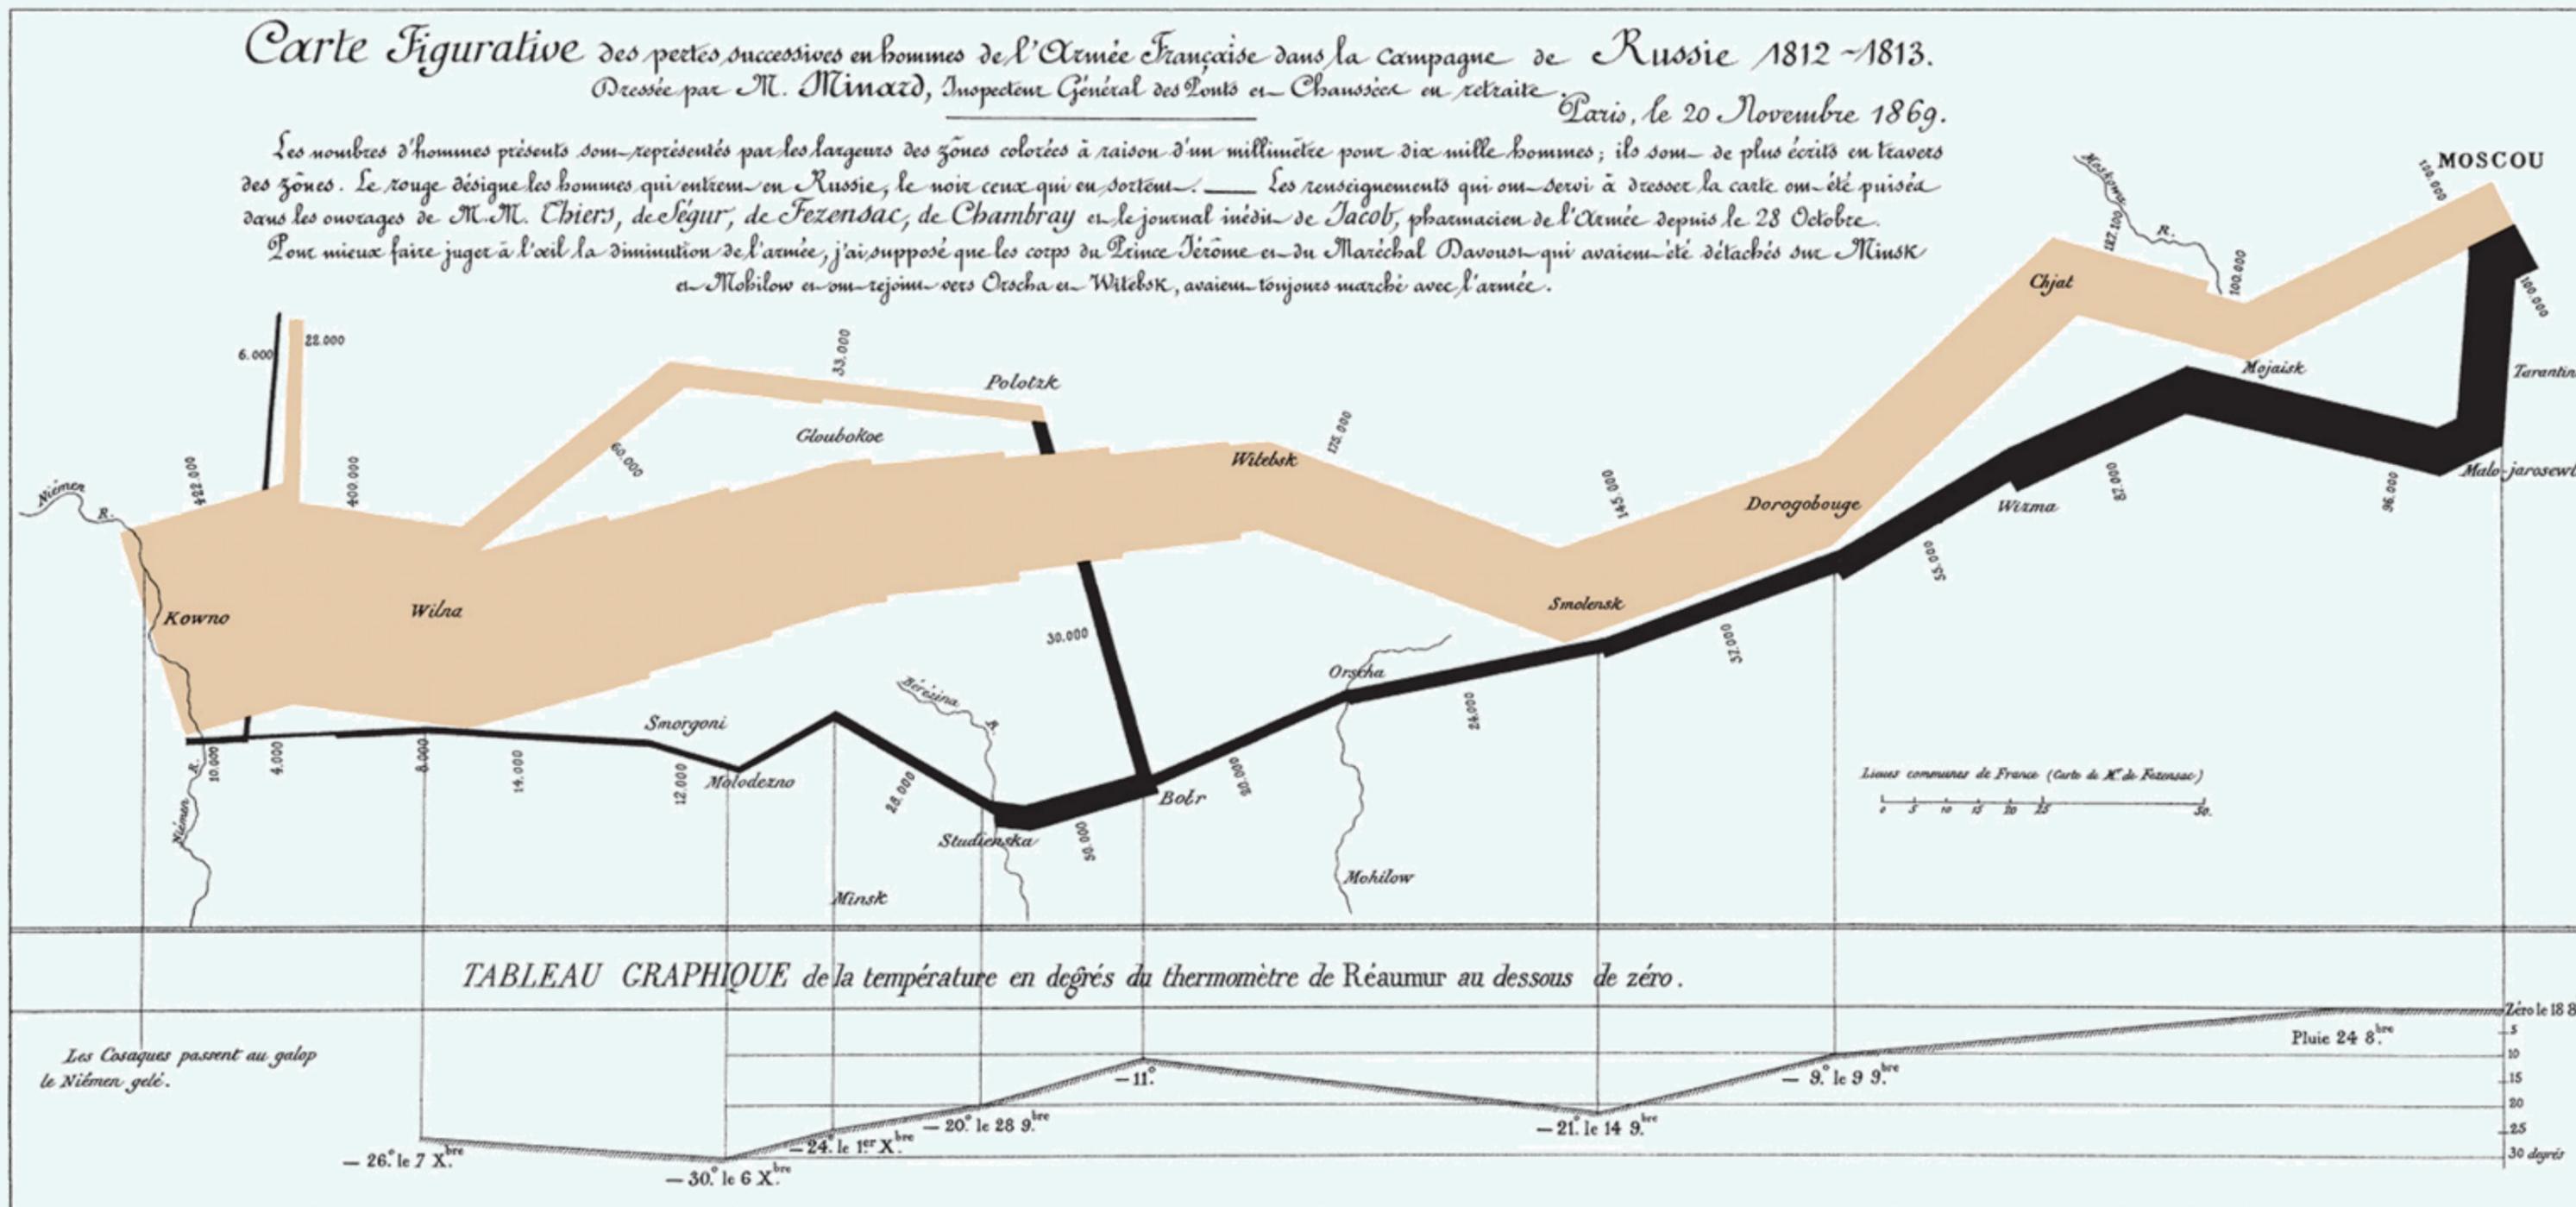

On Friday 21st of July 2023, the second training session on data interoperability for sensors was held by the Deda Next team, titled "SensorThings API standard and FROST open source server solution for interoperable dynamic data".

Training Session on data interoperability: SensorThings API standard and FROST open source server solution

On Wednesday 21st of June 2023, the first training session on data interoperability for sensors was held by the Deda Next team, titled "SensorThings API standard and FROST open source server solution".

Data Viz

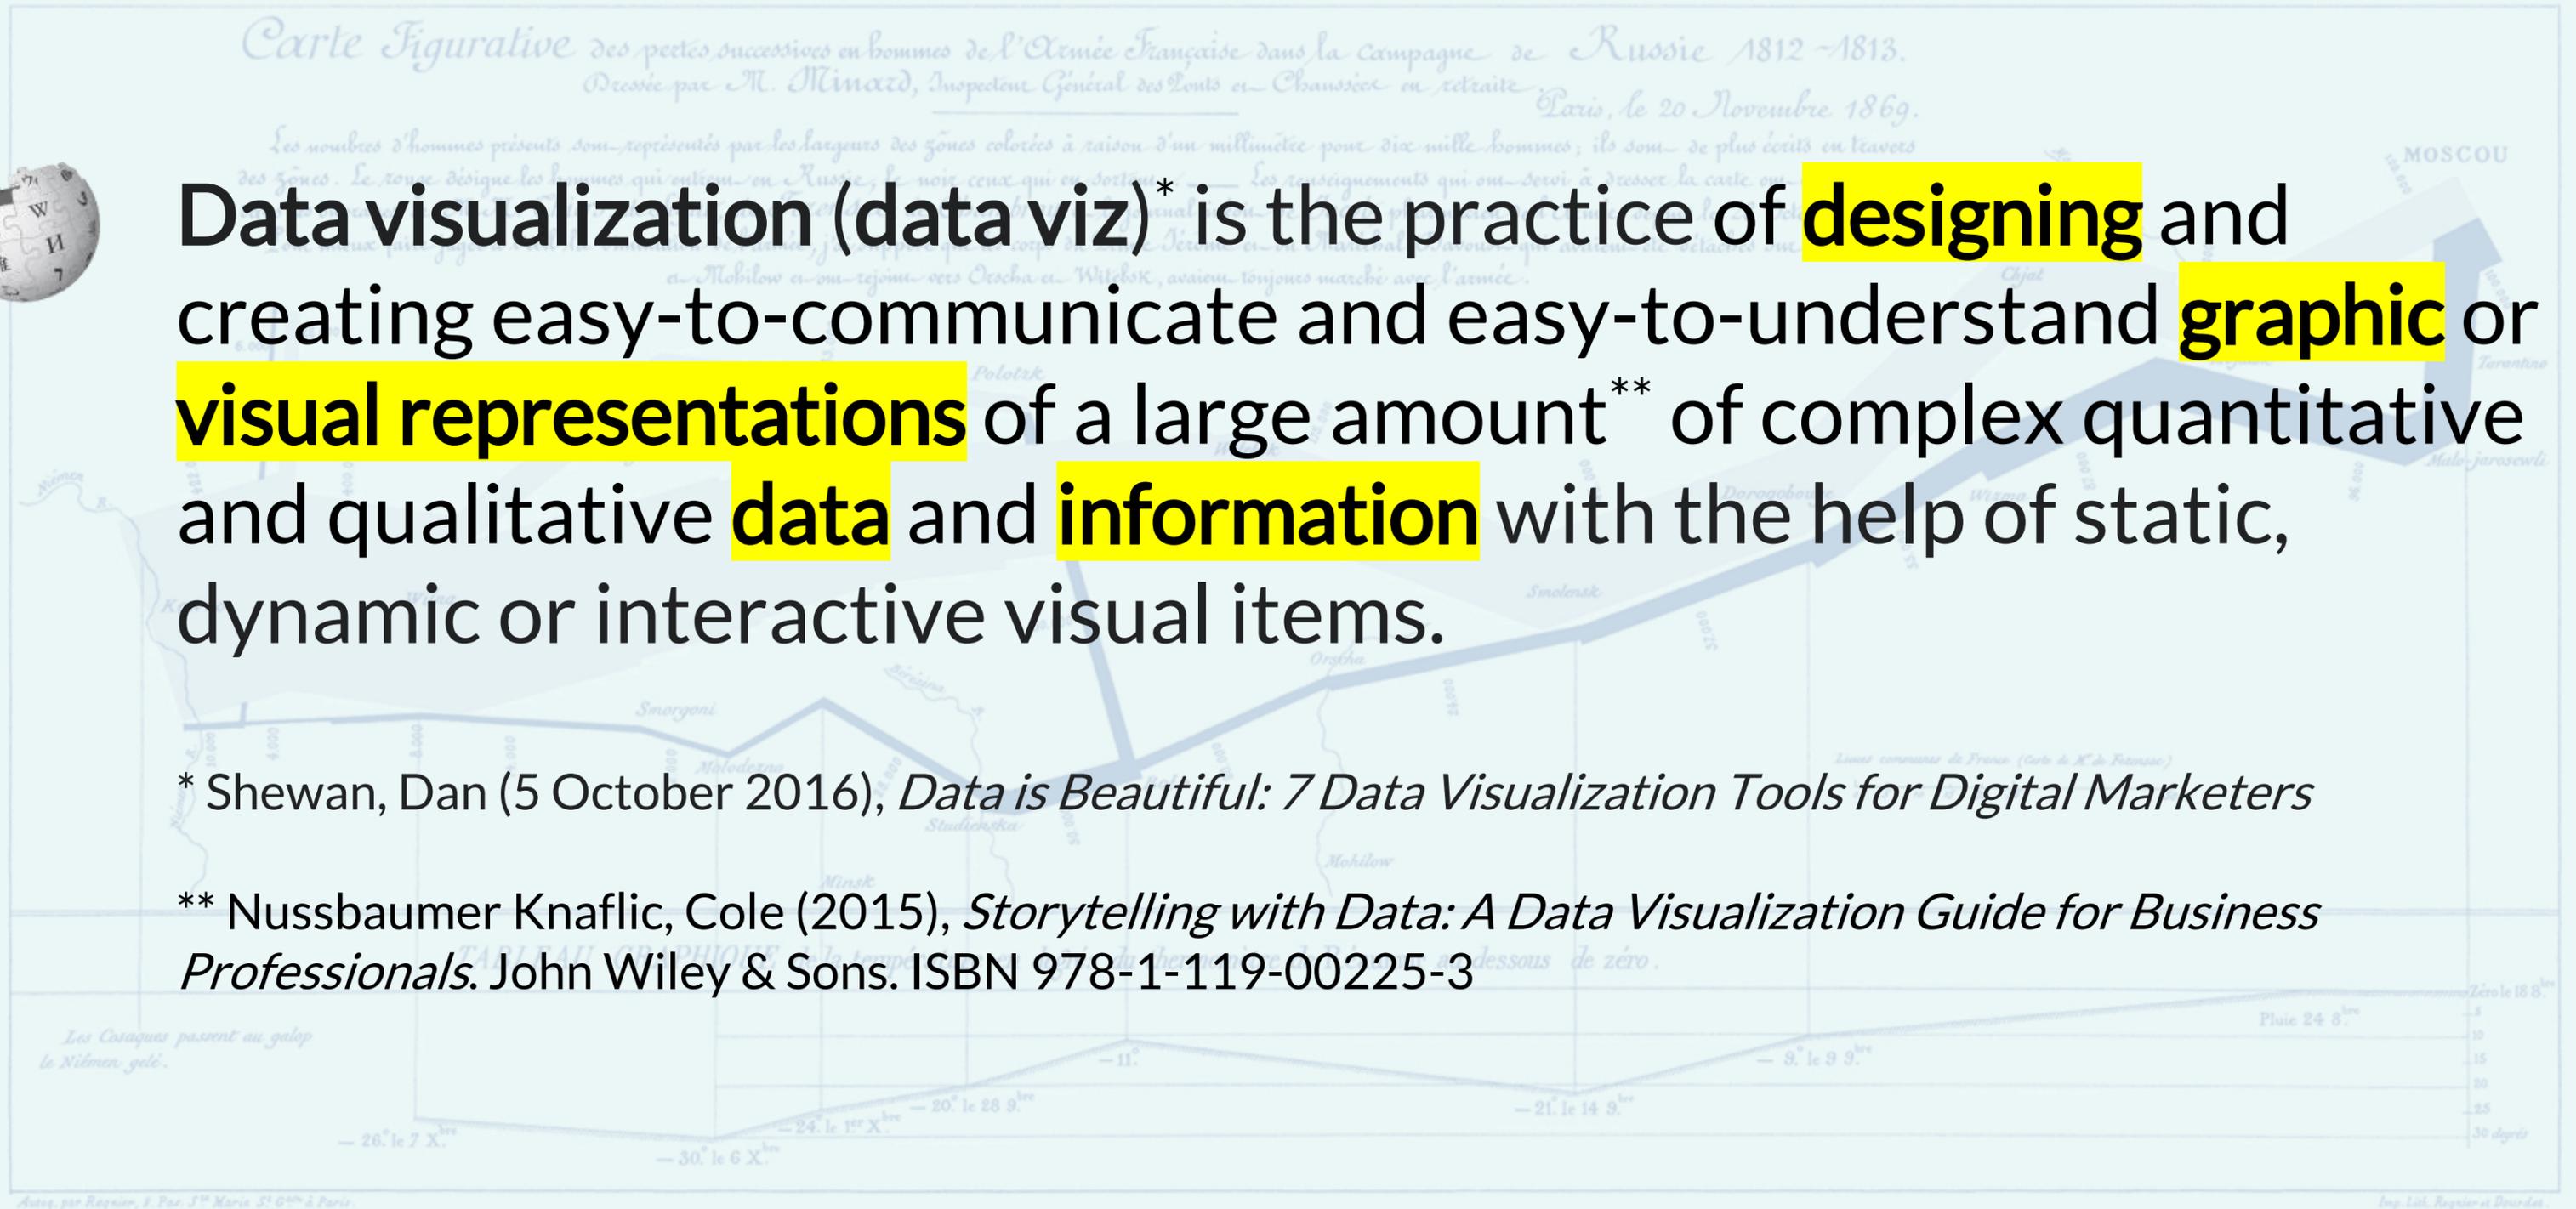

Data viz

Data visualization (data viz)* is the practice of **designing** and creating easy-to-communicate and easy-to-understand **graphic** or **visual representations** of a large amount** of complex quantitative and qualitative **data** and **information** with the help of static, dynamic or interactive visual items.

* Shewan, Dan (5 October 2016), *Data is Beautiful: 7 Data Visualization Tools for Digital Marketers*

** Nussbaumer Knaflic, Cole (2015), *Storytelling with Data: A Data Visualization Guide for Business Professionals*. John Wiley & Sons. ISBN 978-1-119-00225-3

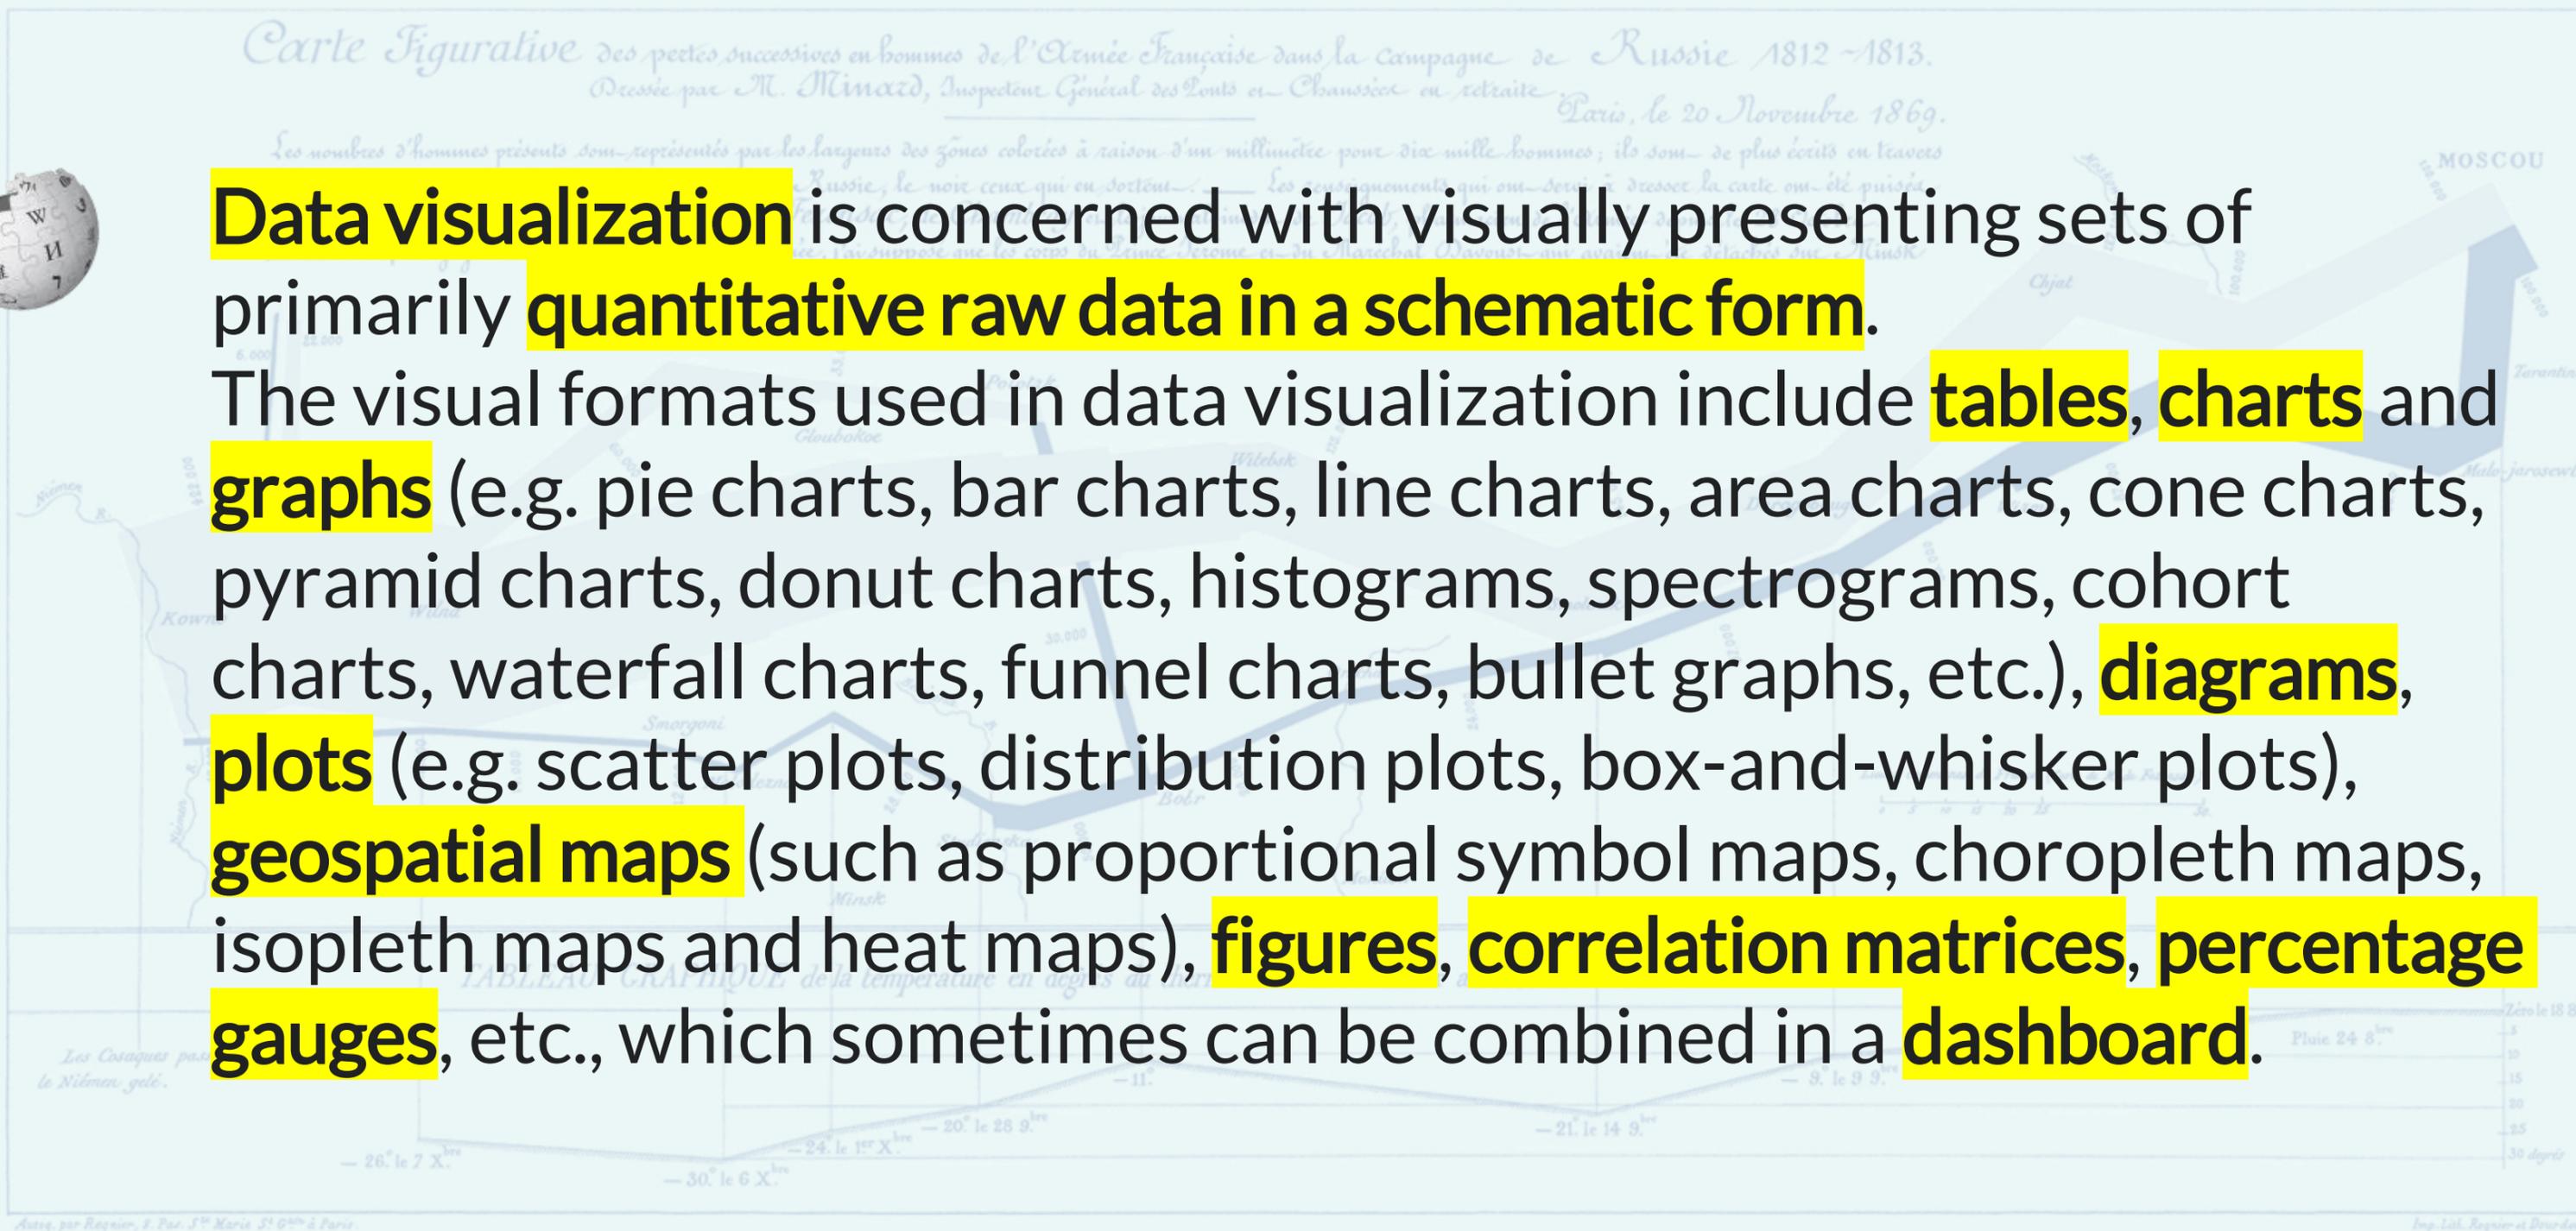

Data viz

Data visualization is concerned with visually presenting sets of primarily **quantitative raw data in a schematic form**.

The visual formats used in data visualization include **tables, charts and graphs** (e.g. pie charts, bar charts, line charts, area charts, cone charts, pyramid charts, donut charts, histograms, spectrograms, cohort charts, waterfall charts, funnel charts, bullet graphs, etc.), **diagrams, plots** (e.g. scatter plots, distribution plots, box-and-whisker plots), **geospatial maps** (such as proportional symbol maps, choropleth maps, isopleth maps and heat maps), **figures, correlation matrices, percentage gauges**, etc., which sometimes can be combined in a **dashboard**.

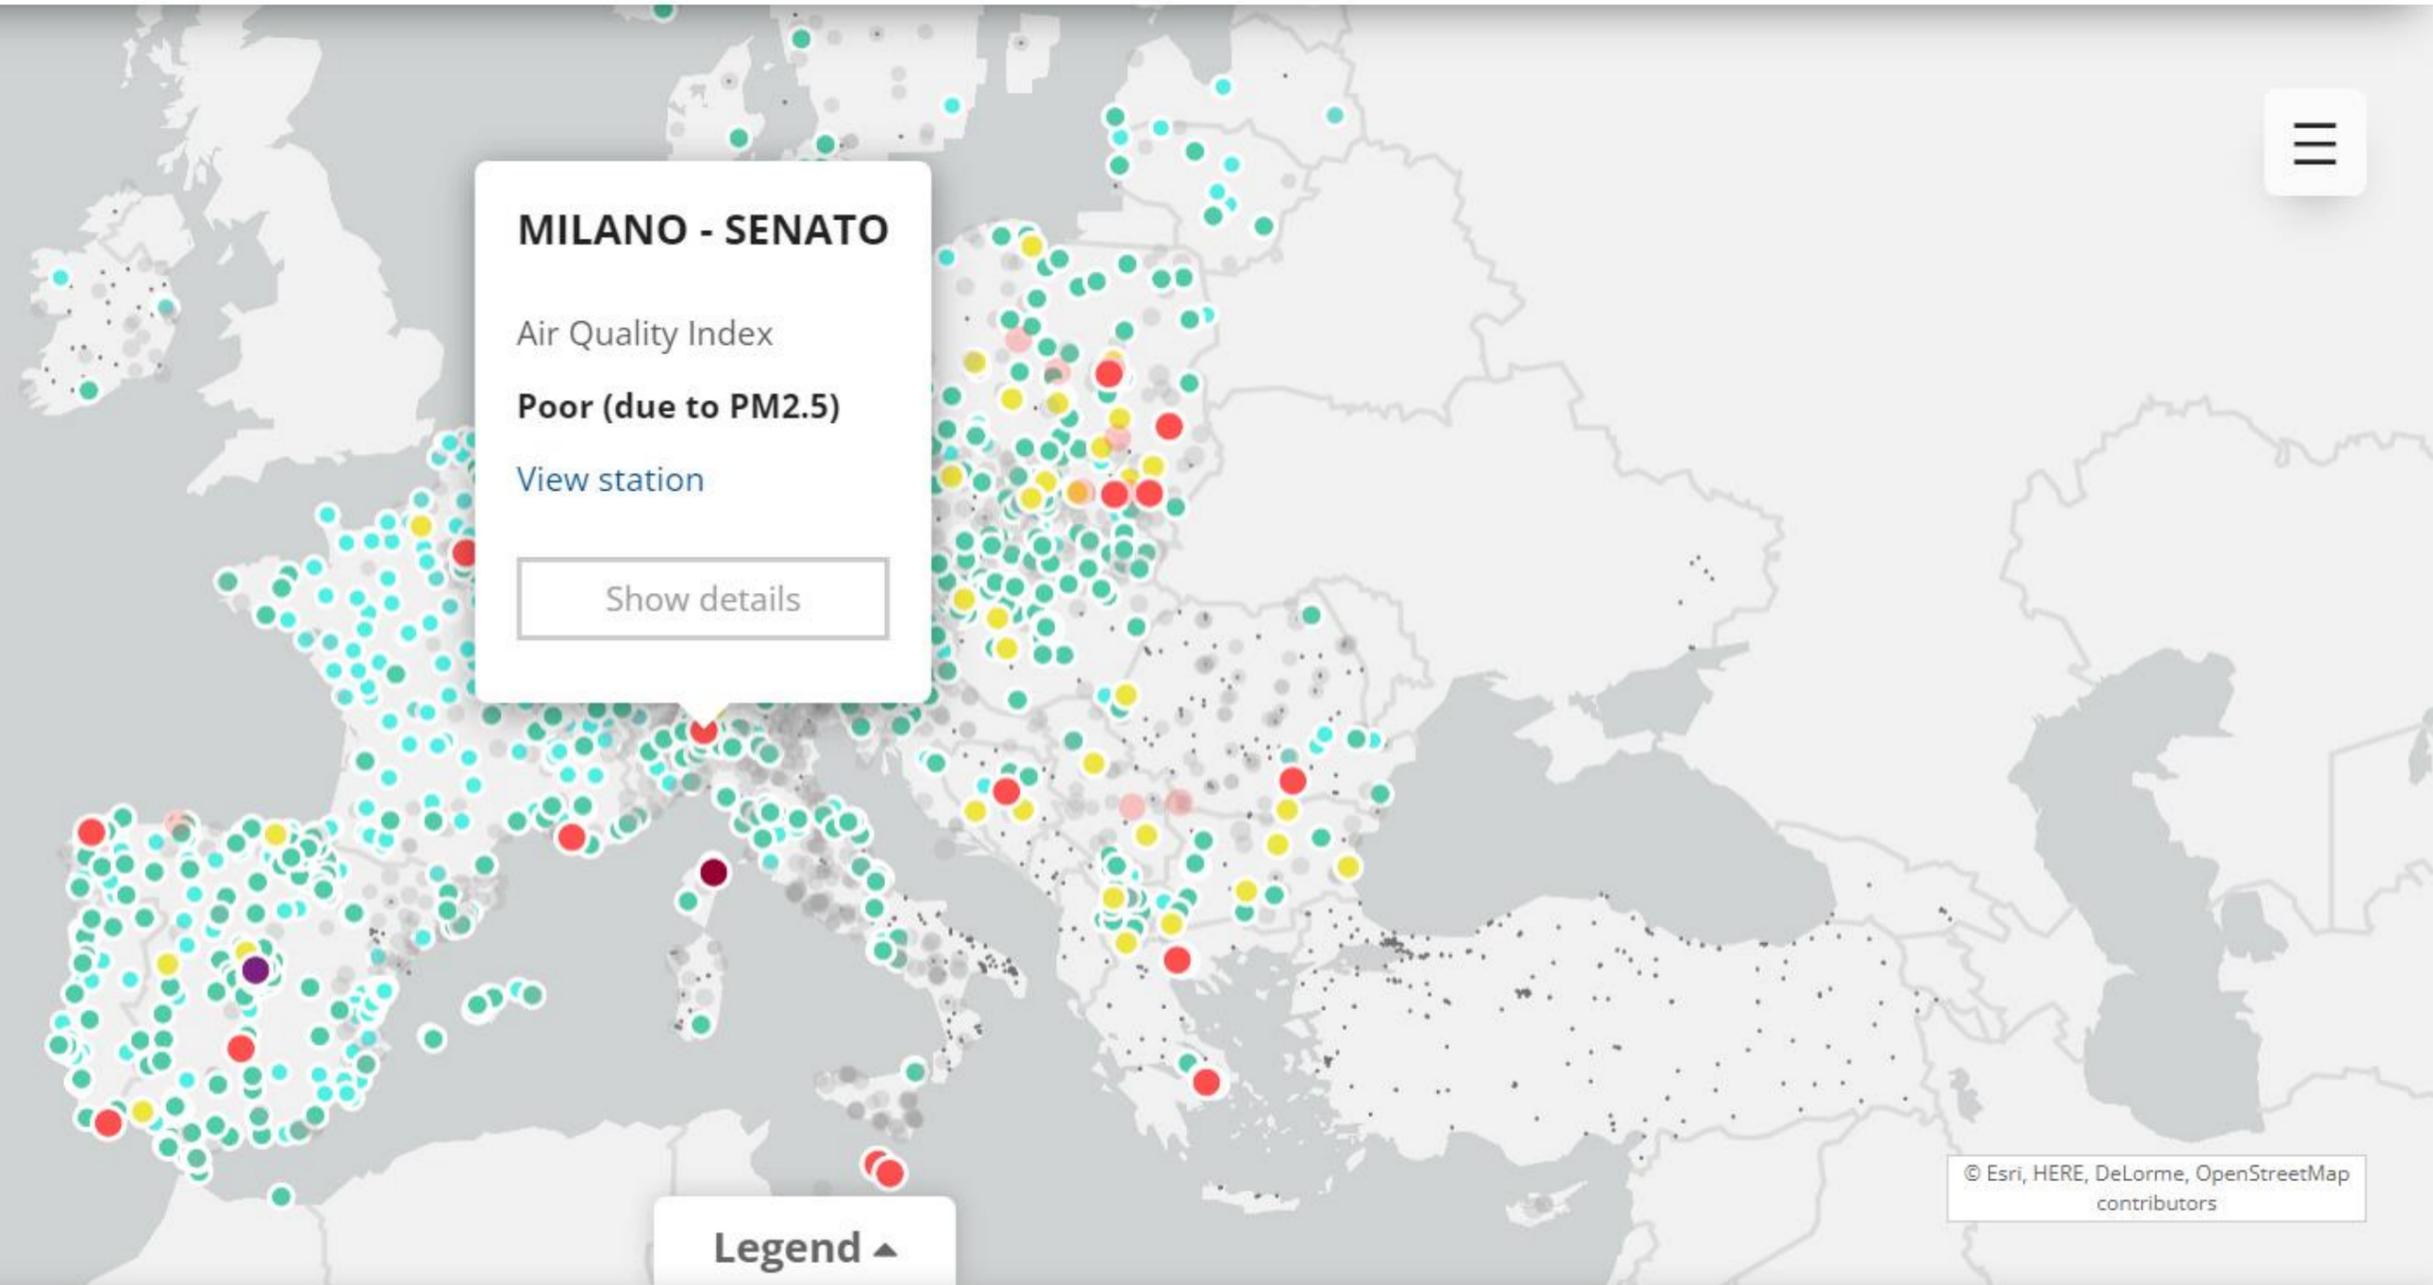

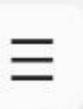

AIR QUALITY INDEX (EEA)

MILANO - SENATO (IT1016A)

Air Quality Index Poor (due to PM2.5)
Date 2023-09-27 08:00 UTC+2
Country Italy
Location VIA SENATO ANG MARINA - Milano (MI)
Classification Traffic
Area Urban

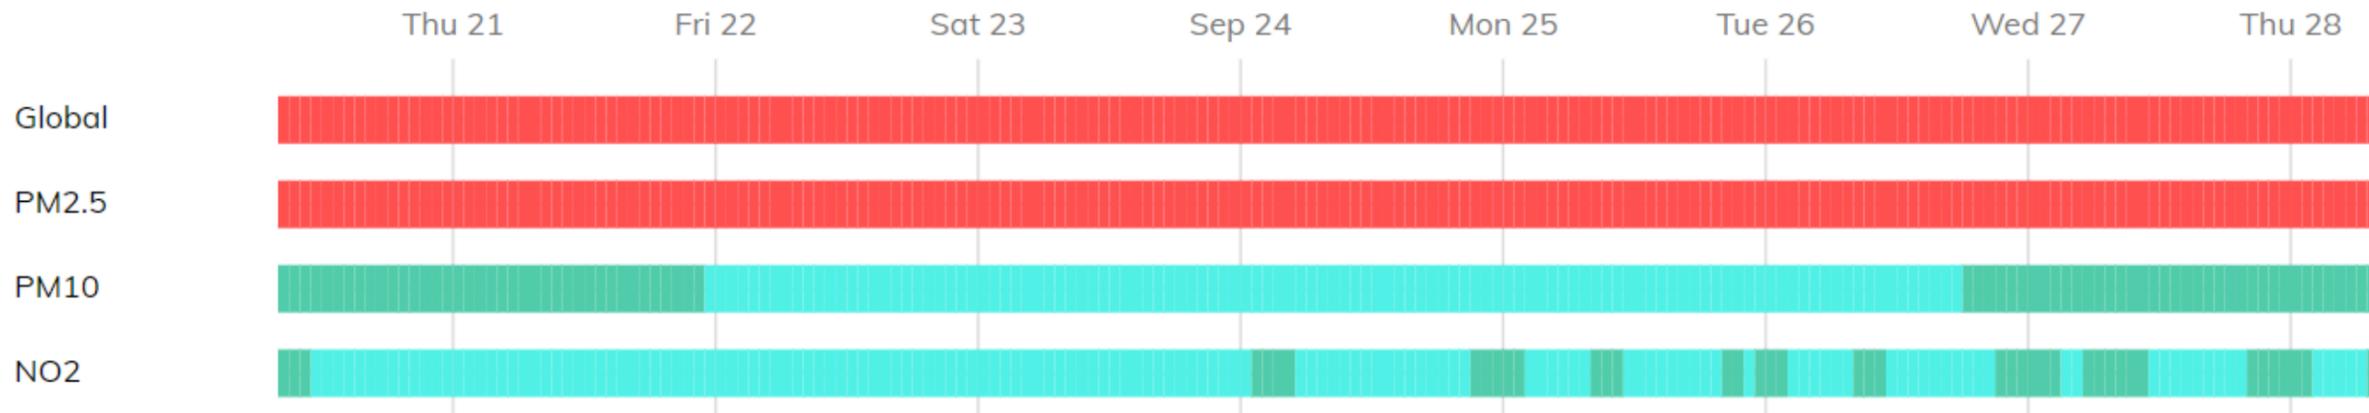

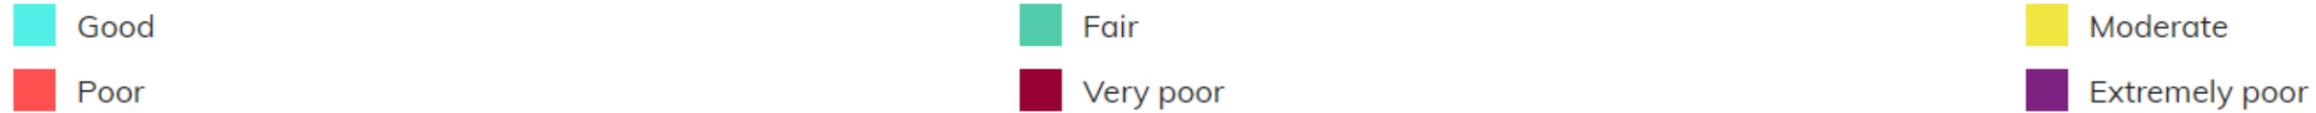

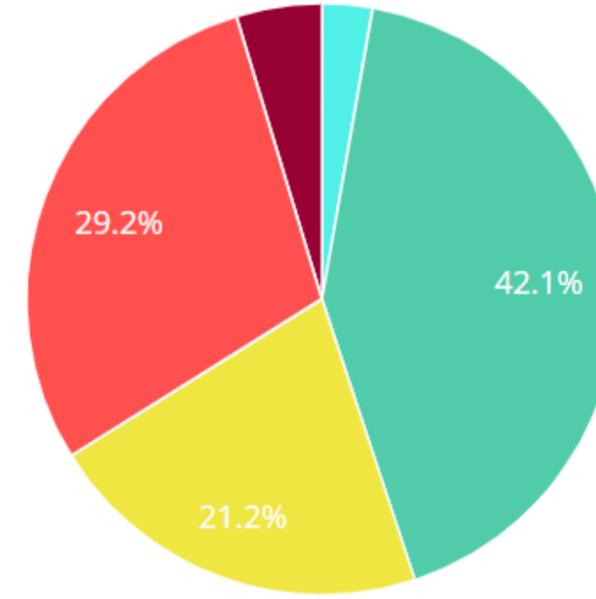

General population

Consider reducing intense activities outdoors, if you experience symptoms such as sore eyes, a cough or sore throat.

Sensitive population

Consider reducing physical activities, particularly outdoors, if you experience symptoms.

Accumulated past 365 days

Legend explained

Circles and dots on the map represent the locations of air quality monitoring stations. The colour corresponds to the air quality index at the given hour at that station. Note that it does not reflect the annual average measured at the air quality situation which may differ significantly (see Info).

Measurements of up to five key pollutants supported by modelled data determine the index level that describes the current air quality situation at each monitoring station. The index corresponds to the poorest level for any of five pollutants according to the following scheme.

Pollutant	Index level (based on pollutant concentrations in $\mu\text{g}/\text{m}^3$)					
	Good	Fair	Moderate	Poor	Very poor	Extremely poor
Particles less than 2.5 μm (PM _{2.5})	0-10	10-20	20-25	25-50	50-75	75-800
Particles less than 10 μm (PM ₁₀)	0-20	20-40	40-50	50-100	100-150	150-1200
Nitrogen						

Daily Air Quality Tracker (EPA, US)

<https://www.epa.gov/outdoor-air-quality-data/air-data-daily-air-quality-tracker>

Air Data - Daily Air Quality Tracker

Compare daily AQI values for any year with the 20-year high and low (2000-2019) and the five-year average (2015-2019). You can also generate a [one-page PDF report for 2020](#).

More information: The most recent AQI values are based on available ozone and PM_{2.5} data from AirNow (see "Use of AirNow Data" info box). The 20-year high/low backdrop is based on AQS data from 2000-2019. It shows the range of the highest and lowest daily max AQI values on each date. The 5-year average is based on AQS data from 2015-2019. It shows the average of daily max AQI values on each date.

Tip: Hover over lines to display data points. Download the data using the link below the charts.

Use of AirNow Data

This plot provides ozone and PM_{2.5} data from [AirNow](#) for recent days that are not available from AQS. AQS data, as it becomes available, replaces any AirNow data. The AirNow data are not fully verified and validated through the quality assurance procedures monitoring organizations use to officially submit and certify data on the EPA AQS (Air Quality System) and, therefore, cannot be used to formulate or support regulation, guidance or any other Agency decision or position.

Now, let's look at the data in glorious colour!

Inglewood #3 ▾

Hourly PM2.5 Levels in Inglewood #3

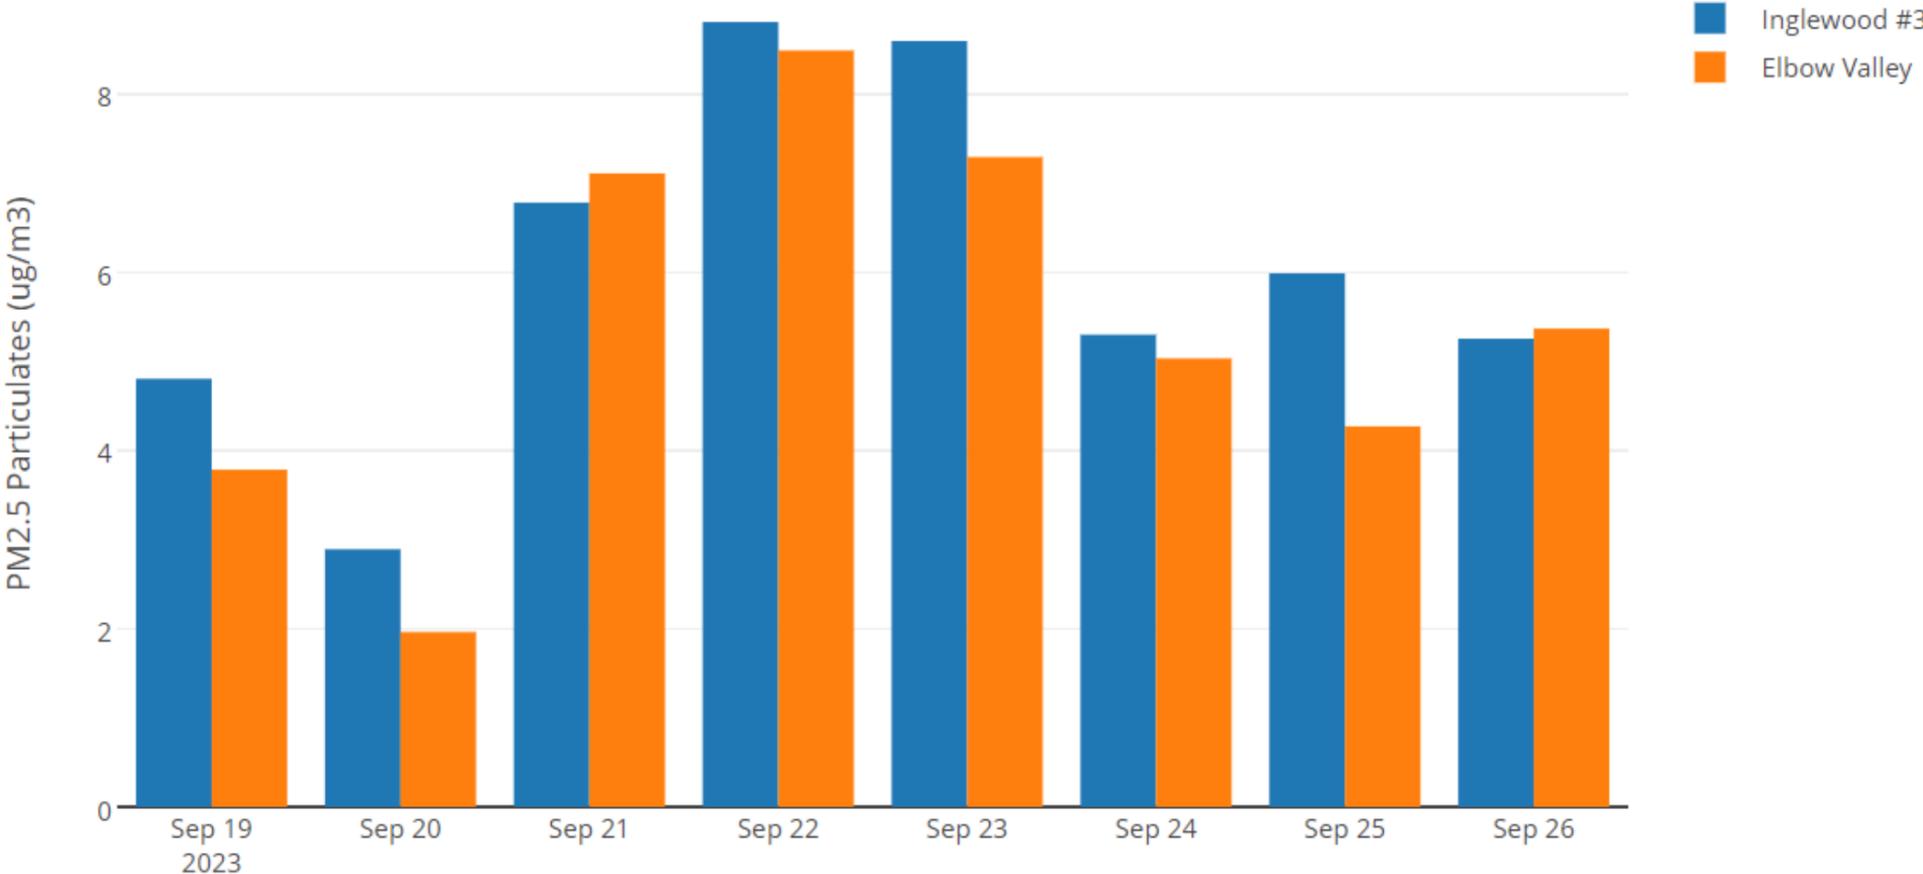

Dare to Compare

You might be curious how the PM2.5 readings vary in different areas. Not for bragging reasons, of course. You're too mature for that. And not only are you mature, you are also thoughtful, you realize that particulate readings can vary for many reasons, and that comparisons do not necessarily highlight problems in any specific area.

Let's take a look.
